Phase Transformations in Metals and Alloys PDF Document

The great majority of phase transformations in metals occur by the growth of a new phase (P) from a few nucleation sites within the parent phase (a)-a nucleation and growth process. The a / P interface therefore plays an important role in determining the kinetics of phase transformations and is the most important class of interface listed. It is, however, also the most complex and least

In alloys, however, composition is also variable and to understand phase changes in ' alloys requires an appreciation of how the Gibbs free energy of a given phase : depends on composition as well as

temperature and pressure Since the phase I I G . transformafions described in this book mainly occur at a fixed pressure of . I 1 arm most attention will be given to changes in composition and

The Theory of Transformations in Metals and Alloys

Suitable thermal and mechanical treatments will produce extensive rearrangements of the atoms in metals and alloys, and corresponding marked variations in physical and chemical properties. This book describes how such changes in the atomic configuration are effected, and discusses the associated kinetic and crystallographic features. It deals with areas such as lattice geometry, point defects

Phase Transformations in Alloys Industrial Metallurgists

The type of transformation that can occur depends on the specific alloy. Not all types of transformations occur in all alloys, and in some alloys no transformations are possible, other than the solid-liquid transformation. Two of the most common phase transformations encountered with common alloys are eutectoid and precipitation. For both types of transformation, the transformation involves the movement of atoms through the metal to rearrange themselves to form the new phase or phases.
